Professional Summary

Full Stack Developer (Web & Mobile) with 5+ years of freelance experience, specializing in TypeScript, React, Next.js, Node.js, NestJS and React Native. I have designed and shipped to production booking platforms (hospitality, spa, travel, ticketing), SaaS products, CRMs and mobile apps, from architecture to deployment.

Experienced in REST and GraphQL API design, the Backend-for-Frontend (BFF) pattern, Stripe payment integration (subscriptions, refunds, commissions), CI/CD (GitHub Actions, GitLab CI), Docker and AWS. Committed to software quality: automated testing (Jest, Vitest, Playwright, 1,700+ tests on a single project) and AI integration (LLM, NLP) in business products. I also build agentic development pipelines with Claude Code and MCP, from ticket to production.

Technical Skills

- **Languages:** TypeScript, JavaScript (ES6+), C#, PHP, SQL, HTML5, CSS3
- **Frontend:** React, Next.js, Angular, Vue.js, Nuxt 3, Vite, Tailwind CSS, Zustand, Pinia, React Hook Form, Zod
- **Backend:** Node.js, NestJS, ASP.NET Core, Laravel, Nitro, REST API, GraphQL, Prisma, Passport JWT, GraphQL Subscriptions (real-time)
- **Mobile:** React Native, Expo (EAS, Expo Router, Expo Push), Ionic, Progressive Web App (PWA)
- **Databases:** PostgreSQL, MySQL, MongoDB, Redis, EF Core, Supabase (Row-Level Security, Auth, Storage)
- **DevOps & Cloud:** AWS (EC2, S3, RDS, Lambda, ECS Fargate, SQS, SES, CloudFront, WAF), Terraform, Docker, nginx, Linux, CI/CD, GitHub Actions, GitLab CI, GHCR, Netlify, Vercel, VPS
- **Testing & Quality:** Jest, Vitest, Playwright, Supertest, Testcontainers, k6 (load testing), OWASP ZAP, React Testing Library, Maestro, xUnit, TDD, code review
- **Integrations & Third-party APIs:** Stripe (payments, subscriptions, refunds), Amadeus API, Google Vision (OCR), Google Sign-In, INSEE Sirene, Brevo, Firebase Crashlytics
- **AI:** Claude Code (agents, skills, hooks, workflows), MCP (Model Context Protocol), agentic development, LLM (Gemini), NLP, sentiment analysis
- **Architecture & Methods:** Backend-for-Frontend (BFF), Clean Architecture, modular monolith, multi-tenant, Infrastructure as Code (Terraform), ADR, Agile / Scrum, Git, Taiga, UML / 2TUP

Professional Experience

Full Stack Developer — Glib Corporation

Freelance · Remote · 03/2025 – Present · Travel booking platform

- Designed and built the payment and subscription module with Stripe (online payments and recurring subscriptions).
- Integrated the Amadeus API for hotel, flight and itinerary search and booking.
- Implemented scheduled jobs (cron) and the order lifecycle in the NestJS backend.
- Industrialized deployment with Docker and GitLab CI; tracked work in Agile on Taiga.
- **Technologies:** NestJS, Node.js, TypeScript, Prisma, PostgreSQL, Stripe, Amadeus API, Docker, GitLab CI

Full Stack Developer — Digitalia LTD

Freelance · Remote · 03/2024 – 01/2026 · CRM and AI for the construction industry

- Built a custom CRM and dynamic forms for construction professionals.
- Delivered a React Native mobile app for on-site project tracking.
- Integrated an LLM (Gemini) for sentiment analysis of customer emails and automated reply generation.
- Automated testing (Jest) and deployment (Docker, GitHub Actions).
- **Technologies:** React, React Native, Node.js, TypeScript, PostgreSQL, Docker, GitHub Actions, Jest, LLM / Gemini, NLP

Full Stack Developer — MDCL

Freelance · Remote · 04/2024 – 01/2026 · Sports ticketing and seat management

- Built an online ticketing platform: ticket sales, season passes and seat management.
- Created a real-time sales analytics dashboard for event organizers.
- **Technologies:** React, Next.js, NestJS, TypeScript, MongoDB, GitHub Actions

Mobile Developer — Doci

Freelance · Remote · 11/2024 – 01/2025 · Location-based mobile app

- Migrated a no-code app to a custom React Native (Expo) mobile app.
- Implemented native geolocation to show nearby venues.
- **Technologies:** React Native, Expo, Laravel, PHP, PostgreSQL

Frontend Developer — OnlyTravaux

Freelance · Remote · 09/2023 – 02/2024 · PWA for the construction industry

- Built a Progressive Web App (PWA) for site tracking, plus the Directory and InfoTravaux modules.
- Helped define business processes with industry professionals.
- Covered components with unit tests (Jest, React Testing Library).

- **Technologies:** React, Vite, TypeScript, Jest, React Testing Library, Laravel, MySQL

Full Stack Developer — The 23 Creative

01/2023 – 08/2023 · Construction app and back office

- Built a customer-tracking back office and the related client app.
- Managed AWS infrastructure (EC2, S3) and set up a continuous deployment pipeline (GitLab CI).
- **Technologies:** Vue.js, Laravel, PHP, MySQL, AWS EC2, AWS S3, GitLab CI

Full Stack Developer — Siooka

09/2022 – 08/2023 · Restaurant SaaS (ordering and QR codes)

- Built ordering, invoicing and QR-code ticket features.
- Designed per-restaurant theme customization from the back office.
- **Technologies:** React, TypeScript, GraphQL, Node.js, AWS, GitLab CI

Key Projects

Hotellerie: Stay, Stay API and Stay BFF — SaaS hotel PMS and booking marketplace

Personal project · 4 GitHub repositories · 10/2025 – Present

- Designed a multi-hotel SaaS PMS (Property Management System): hotels, rooms, reservations, services, payments, subscriptions and multi-role dashboards (admin, manager, receptionist, customer).
- Built the PMS API (Stay API) in ASP.NET Core 9 / C# following Clean Architecture (Domain, Application, Infrastructure, API): EF Core, PostgreSQL, JWT, FluentValidation, Swagger / OpenAPI.
- Designed the consumer booking marketplace (search → booking → payment → confirmation): server-rendered Next.js 15 / React 19 frontend and a NestJS 11 Stay BFF that alone holds tokens and secrets; the frontend never calls the PMS directly.
- Secured payment ↔ booking integrity with Stripe (authorize then capture, idempotency, reconciliation), PCI SAQ-A compliant.
- Made the BFF resilient: Redis caching and sessions, circuit breaker (opossum), rate limiting, Helmet, structured Pino logging with correlation IDs, health checks.
- Built the Next.js back office (Atomic Design, TanStack Query, Radix UI, Recharts) with fr/en i18n, EUR/USD multi-currency (next-intl) and WCAG 2.1 AA accessibility (axe-core).
- Ensured quality: xUnit, NSubstitute, Testcontainers, Jest, Supertest, Vitest, Playwright, k6 load testing, OWASP ZAP security scanning, OpenAPI-generated types, GitHub Actions CI and Docker Compose.
- **Technologies:** ASP.NET Core 9, C#, EF Core, PostgreSQL, NestJS 11, Next.js 15, React 19, TypeScript, Redis, Stripe, Tailwind CSS, TanStack Query, Docker, GitHub Actions, k6

Spa & Salon Booking — Booking SaaS for spas and salons

Team project (TMap-Works organization) · Monorepo · 08/2026 – Present · 580+ commits

- Built a multi-tenant SaaS MVP: online booking (service catalog, chosen or first-available practitioner, real-time slots, rescheduling, cancellation), back-office calendar, staff and role management, CRM, checkout, notifications and reporting (revenue, no-shows).
- Structured the API as a NestJS modular monolith with 8 business modules (identity, catalog, availability, appointments, crm, payments, notifications, reporting) and shared front/back API contracts.
- Guaranteed zero double bookings with a PostgreSQL exclusion constraint (EXCLUDE USING gist on tstzrange) plus a Redis lock, covered by concurrency tests.
- Enforced multi-tenant isolation (tenant_id on every business table), UTC time-zone storage and integer money amounts.
- Integrated Stripe (tokenization, signed webhooks, PCI SAQ-A) and idempotent asynchronous notifications via EventBridge Scheduler → SQS → Lambda → Amazon SES / SNS.
- Defined the entire AWS infrastructure in Terraform (14 modules, 3 environments): multi-AZ ECS Fargate, RDS PostgreSQL, ElastiCache, CloudFront + WAF, Cognito, Secrets Manager, CloudWatch / X-Ray, GuardDuty, CloudTrail, KMS.
- Automated delivery with 12 GitHub Actions workflows (CI, E2E, security scanning, Terraform, dev / staging / prod deployments, auto-merge, PR governance) and documented decisions in 17 ADRs.
- **Technologies:** NestJS, Next.js 15, React, TypeScript, Prisma, PostgreSQL 16, Redis, Stripe, AWS (ECS Fargate, RDS, Lambda, SQS, SES, SNS, CloudFront, WAF), Terraform, Docker, GitHub Actions, Playwright, Vitest

GoltFork — Food truck mobile marketplace

Two Android apps (buyer and vendor) · Shipped to production

- Designed and delivered end to end two Expo / React Native apps backed by a NestJS API.
- Integrated Stripe for payments, subscriptions and automatic refunds when a vendor declines an order.
- Automated menu import via OCR (Google Vision) and SIRET verification via the INSEE Sirene API.
- Wrote 1,767 automated tests (Jest, Supertest, React Testing Library, Maestro); CI/CD pipeline GitHub Actions → GHCR → Docker VPS.
- **Technologies:** React Native, Expo (EAS, Router), Zustand, NestJS, Prisma, PostgreSQL, Passport JWT, Stripe, Google Vision, Docker, nginx, GitHub Actions

NGO Certification — Certification and transparency platform

Web app in production · Institutional donors and Malagasy NGOs

- Built a full-stack Nuxt 3 / Supabase monolith with financial data isolated by Row-Level Security.
- Delivered an encrypted document vault and a certification back office (Kanban, timestamped audit trail).
- Computed and published a 5-criteria transparency score for each NGO.
- Integrated Stripe donations with automatic commission and anonymized internal messaging.
- **Technologies:** Nuxt 3, Vue 3, TypeScript, Tailwind CSS, Pinia, Supabase, PostgreSQL, Zod, Stripe, Brevo, Vitest, Playwright, Netlify

Other Projects

- **Spylebook** — real-time social network (React, GraphQL, GraphQL Subscriptions, Prisma).
- **HR Management** — leave and payroll management (ASP.NET Core, C#, Next.js).

Agentic Development & Automation (Claude Code)

On Hotelerie and Spa & Salon Booking, I designed autonomous development pipelines with Claude Code that take a GitHub ticket from requirement to merged pull request, with quality gates and full traceability.

- **Milestone orchestration:** a workflow that processes each ticket in dependency order: isolated git worktree → TDD development → QA and browser verification (Playwright MCP) → adversarial code review → PR → auto-merge when CI is green.
- **Specialized AI agents:** planner; .NET, NestJS / Next.js and back-office developers; QA, code reviewer and integrator; auditors for multi-tenant isolation, MVP scope and design.
- **Skills and commands:** /ticket-create, /milestone-plan, /milestone-run, /ticket, /quality-gates, /run-log, plus 11 domain skills (booking engine, Stripe, tenant isolation, AWS infrastructure, functional acceptance testing).
- **Guardrail hooks:** block edits outside worktrees, forbid --force and --no-verify, auto-format, route incoming requests, and keep a run log (durations, tool failures, redacted secrets) posted as a comment on the issue.
- **Autonomous supervision (Python):** automatic milestone resumption after interruptions, parallel execution of tickets with disjoint file footprints, an AI arbiter that resolves blockers based on the specification and ADRs, and an MCP server for acceptance testing of changed endpoints and pages.
- **GitHub integration:** issues, milestones, GitHub Projects, labels, gh CLI, Conventional Commits, commitlint, branch protection.
- **Technologies:** Claude Code (agents, skills, hooks, workflows), MCP (Model Context Protocol), Playwright MCP, Node.js, Python, PowerShell, GitHub CLI, GitHub Actions

Education

- **Bachelor's Degree in Computer Science** — ESTI, Antananarivo · 2024 – 2025
- **Computer Science Studies (Integration and Development)** — University of Antananarivo · 2021 – 2023 · Mathematics, statistics, 2TUP and UP methods
- **Scientific Baccalaureate** · 2018

Awards

- **2nd place — HIU Hackathon 2023:** e-commerce platform with 3D visualization.
